# NAC Achieves CIS's Top 5 Security Controls

CIS Controls are the top security requirements recommended by governmental and private sector security research organizations to eliminate approximately 85% of vulnerabilities

Here's How

CIS CONTROLS	NAC ANSWER
1 Inventory of Un/Authorized Devices	NAC can see hardware devices on the network
2 Inventory of Un/Authorized Software	NAC gathers information on endpoint software
3 Secure Configurations for Hardware/Software	NAC inspects configurations on endpoints
4 Continuous Vulnerability Assessment/Remediation	NAC ensures compliance with policy and takes automated measures to block/quarantine/disconnect
5 Controlled Use of Administrative Privileges	Set role-based access controls based on company role and professional responsibilities
