

Portnox Cloud

Continuous access control for every identity – human and non-human

The network perimeter is a thing of the past. Today's attack surface is wherever your farthest connection lives. Traditional security stacks were not built for the new reality.

Enterprise access has traditionally been secured by separate tools, policies, and controls, creating gaps where risk can hide. Portnox Cloud replaces that patchwork with one platform and one policy engine, delivering consistent access control for every identity, everywhere, without appliances or rip-and-replace upgrades.

NETWORK ACCESS CONTROL >>

See every identity and device connecting to your network. Cloud-native NAC continuously evaluates risk and enforces policy, without on-premises appliances.

SECURE REMOTE ACCESS >>

Replace broad network access with application-specific control based on identity, posture, and risk. Cloud-native ZTNA secures applications without traditional VPN complexity.

ALWAYS-ON AUTHENTICATION >>

Modernize RADIUS with a cloud-native service that integrates with existing identity providers, enables passwordless authentication, and scales without Windows servers.

INFRASTRUCTURE ADMINISTRATION >>

Secure administrator access to network infrastructure with cloud-native TACACS+, centralized authorization, and complete command auditing.

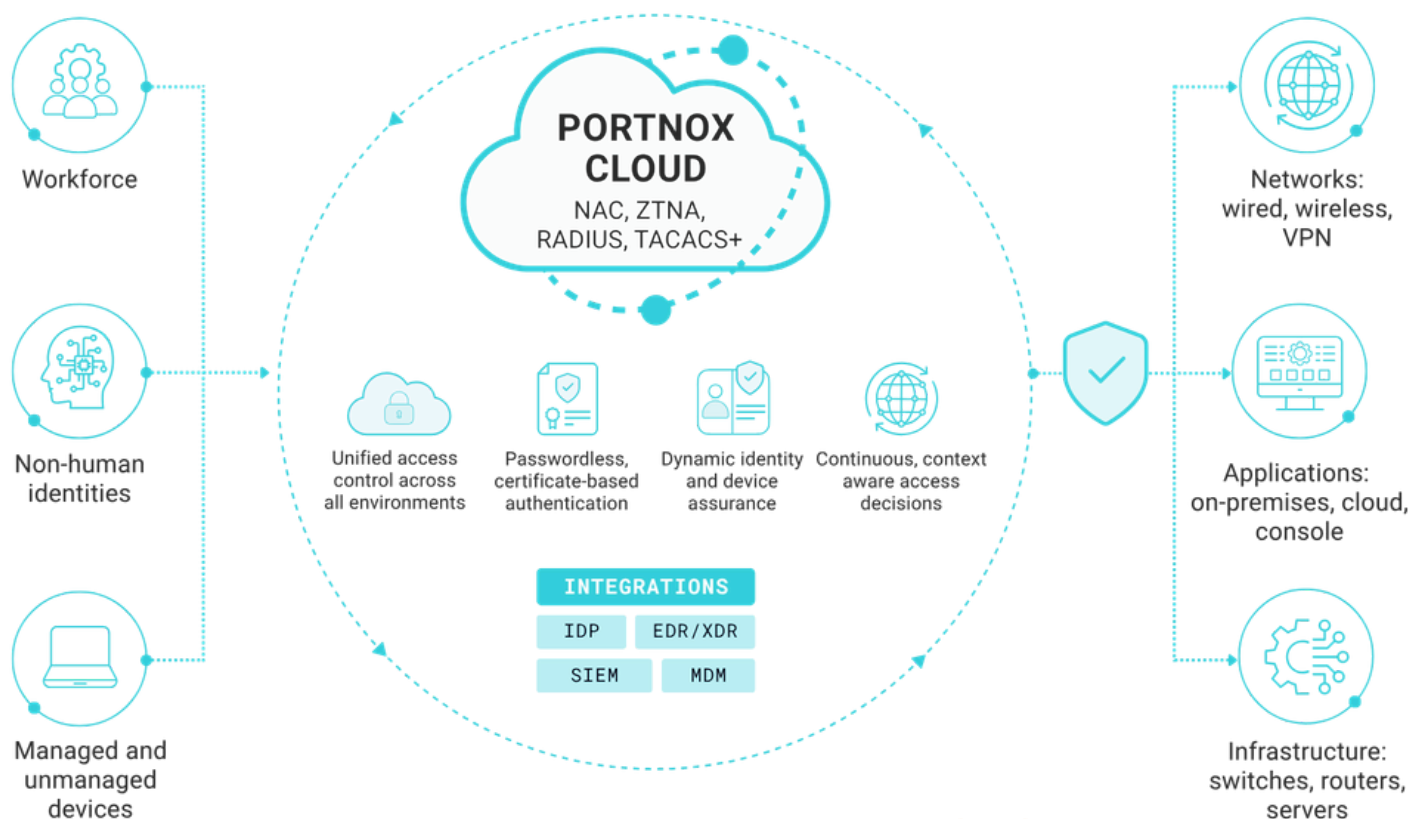

The Portnox Cloud Platform

- ✓ One platform: NAC, ZTNA, RADIUS & TACACS+
- ✓ Passwordless, certificate-based authentication
- ✓ Continuous device & identity risk assessment
- ✓ Identity- & role-based access policies
- ✓ Automated remediation & quarantine
- ✓ Out-of-box integrations: IdP, MDM, SIEM, EDR/XDR, and more
- ✓ Centralized compliance reporting & audit trails
- ✓ Consistent access control policies across your whole environment

The biggest value driver for Portnox Cloud is the improved security — and we don't need as many tools to do the same thing. It's flexible and powerful, and has broadened what we can do now.
